

Worksheet 1. Map the current journey of one customer experience

CUSTOMER JOURNEY

Why does the customer engage in the interaction?

How does the customer go about identifying, ordering and paying for the desired option?

What products and services are provided to the consumer?

Latent need	Awareness of need	Search for options	Decide on options	Order & pay	Receive	Experience good/ service	Post-purchase experience
-Customers struggle to find reliable, off-grid solar solutions. -Past projects failed due to lack of technical support and long customs delays. -Healthcare & education sectors need stable electricity. -Financing issues slow adoption.	- Governments and NGOs promote rural electrification programs. -Disasters drive demand for emergency solar power. - Customers hear about solar solutions via fairs, cooperatives, and distributors.	- Customers research fairs, online platforms, and distributors. -They prioritize cost, financing, and maintenance support. -Trust issues with new brands like Sun King.	- Customers evaluate past project success and supplier reliability. - Concerns over product durability, technical support, and financing.	- Payment model: 30% upfront, 70% after 60 days (Wire Transfer). - Customs & logistics delays (6 months) impact deliveries. - NGOs & MFIs lack capital for bulk orders.	- Shipping issues & long customs clearance create delays. - Limited technical support complicates installation.	- High-quality products, but occasional defective units. - Battery shipping restrictions make replacements difficult.	- No structured post-sale support; response times are slow. - Customers lack updates on warranties, parts, and new models. - Low recommendation rate due to weak engagement.

Worksheet 2:

Identify WTP drivers and customer pain points at each stage of the journey

Pain Points							
Latent need	Awareness of need	Search for options	Decide on options	Order & pay	Receive	Experience good or service	Post-purchase experience
- Customers struggle to find reliable off-grid solar solutions. - Lack of technical support, monitoring, and customs delays (up to 6 months) slow down project execution. - Healthcare facilities lack electricity, preventing vaccine storage and emergency care. - Schools without power limit student learning.	- Governments and NGOs recognize the need for rural electrification. - Cultural and language barriers complicate transactions with Sun King. - Disasters create urgency, but funding takes too long to mobilize.	- Customers struggle to identify trusted solar providers. - Mistrust of Sun King due to lack of prior projects in Latin America. - Customers prioritize cost, warranties, and financing, but reliable technical support is lacking. - NGOs and cooperatives lack financing options.	- Customers evaluate brands based on past project success, warranties, and financing models. - Uncertainty about maintenance and product durability affects decision-making. - Financing constraints limit purchasing power.	- NGOs and cooperatives struggle with capital for bulk purchases. - Customs clearance takes up to 6 months, delaying distribution and resale. - Transaction cycles take ~180 days, increasing financial strain.	- Poor knowledge of importation processes by some NGOs and MFIs. - Time zone differences with China make technical support difficult. - Limited local distribution slows last-mile delivery.	- Customers recognize Sun King's high-quality products, but occasional defective units cause frustration. - Lack of literature in Spanish complicates product adoption. - Replacement process is difficult due to lithium battery shipping restrictions. - Lack of local maintenance support complicates long-term use.	- Customers need regular updates on product availability, spare parts, and warranties and don't get them. - Sun King provides minimal post-sale support, causing frustration. - No structured after-sales communication. - Customers hesitate to recommend Sun King due to lack of long-term engagement.

Worksheet 3:

Capture the information flow for this customer experience

Information Flows

	Latent need	Awareness of need	Search for options	Decide on options	Order & pay	Receive	Experience good or service	Post-purchase experience
Description of information	Customers seek off-grid solar solutions but struggle with financing and supplier reliability.	Customers recognize that solar energy can address their energy challenges.	Customers explore solar providers and evaluate solutions.	Customers finalize their provider based on cost, financing, and track record.	Customers initiate payment and confirm orders.	Shipment and customs clearance process.	Customers use solar products and assess performance.	Customers seek support, warranty claims, and spare parts.
Trigger	Customers seek off-grid solar solutions but struggle with financing and supplier reliability.	Government electrification programs, disaster response initiatives, and NGO projects.	Industry fairs, distributor networks, online searches, and referrals.	Comparative analysis of suppliers, reviewing project case studies.	Purchase agreements, funding approvals from NGOs or government bodies.	Product dispatch from manufacturing hubs.	Product installation and first-time use.	Issues with system performance, expansion needs, or maintenance.
Frequency	Customers seek off-grid solar solutions but struggle with financing and supplier reliability.	Periodic—based on policy changes, funding availability, or emergency situations.	Sporadic—when new tenders or projects are launched.	One-time per procurement cycle.	Occasional—linked to procurement schedules.	Infrequent—depends on lead times (up to 180 days).	One-time at initial deployment, followed by ongoing usage.	Occasional—when problems arise.
Richness	Moderate—email inquiries, in-person meetings, and research-based insights.	Low—primarily document-based information from reports and government agencies.	Moderate—brochures, presentations, and price comparisons.	Moderate—customer receives proposals with technical and financial details.	Low—transactional documents and payment confirmation.	Moderate—shipping updates and customs paperwork.	Moderate—manuals, online training, and technician guidance.	Low—customer support is mostly email-based with limited proactive outreach.
Customer effort	Moderate—email inquiries, in-person meetings, and research-based insights.	Medium—customers must actively research and verify potential providers.	Hightime-consuming process of gathering quotes and analyzing technical specifications.	High—customers require detailed vetting, negotiations, and contract finalization.	High—payment terms (30% upfront, 70% after 60 days) require financial planning.	High—customers must manage customs and logistics challenges.	Medium—basic training required for installation and maintenance.	High—customers often wait for slow responses and lack easy access to spare parts.
Inference	Customers often rely on word-of-mouth or government/NGO recommendations to find solar solutions.	Customers need better access to validated data on solar solutions and financing.	Customers prioritize cost, reliability, and ease of maintenance.	Many customers lack the technical knowledge to assess system performance.	NGOs and cooperatives often struggle with capital, delaying orders.	Delays in delivery affect project timelines, requiring better logistics support.	Some units arrive defective, requiring replacement logistics	Customers hesitate to recommend due to weak after-sales service.
Improvement ideas	AI-driven analytics to predict customer energy needs and financing challenges.	Customized digital campaigns and government collaboration for better awareness.	AI-powered supplier comparison tool with real-time customer reviews.	Automated ROI calculator and financing simulation tool.	Smart payment reminders and digital Payments	Real-time shipment tracking and automated customs documentation processing.	AI-based remote diagnostics and smart training chatbots.	Predictive maintenance alerts and AI-powered multilingual customer support.

Worksheet 4:

Why-How Ladder

In the eyes of the customer, the purpose of the relationship with our firm is to...

Worksheet 5. Responses To Pain Points And Required Information

Worksheet 6. Learning From Repeated Customer Experiences
