

Unlocking Sustainable Energy Access in LATAM

- Sun King is one of the largest off-grid solar companies globally, yet its presence in Latin America remains limited despite vast unmet energy needs. Millions of households, clinics, and schools across the region still lack access to reliable electricity. Distributors, NGOs, and governments are actively seeking solar solutions, but face barriers such as high costs, slow logistics, limited support, and low awareness
- Our goal is to design a Connected Strategy that turns Sun King from a hardware provider into a long-term partner for energy transformation. We leverage information flows, digital tools (like Angaza's PAYGo platform), AI, and local engagement to enhance the customer experience across all stages: from discovery to post-sale.
- It's not just about selling solar: it's about building trusted, data-driven relationships that scale impact sustainably across health, education, and other economic sectors.

Current Strategy & Evaluation

- - Sun King's strategy focuses on high-quality product sales via distribution partners.
- - Strength: Strong hardware and PAYGo capability.
- - Weakness: Weak after-sales, disconnected data systems, limited proactive engagement.
- - Evaluation: Strong delivery capacity but lacks connected, relational strategy.

Market Positioning

- - Target Customers: NGOs, MFIs, rural agencies, cooperatives.
- - Value Proposition: Affordable, scalable energy access.
- - Current Relationship: Transactional and product-based.
- - Opportunity: Position Sun King as a long-term energy partner.

Execution Challenges

- - Operational friction from manual systems.
- - Disconnected tools (CRM, PAYGo, logistics).
- - Long delivery lead times, limited support.
- - Lack of visibility into system health and customer experience.

Financial Performance & Resources

- - Sun King is well-funded and scalable.
- - Strength: Global supply chain and PAYGo infrastructure.
- - Gap: Lack of backend investment in connected tools.
- - Opportunity: Use CRM, Angaza, OfficeTrack, and APIs to build a smart ecosystem.

External Constraints & Governance

- - Multi-actor governance: public sector, banks, NGOs.
- - Sun King is evaluated on long-term results, not just sales.
- - Need for traceability, transparency, and proactive service.
- - Strategy must improve visibility and trust.

Connected Strategy Vision

- - Shift from product supplier to crowd orchestrator.
- - Integrate CRM, PAYGo, logistics, and support.
- - Use AI to predict needs and automate service.
- - Build long-term relationships through proactive data use.

STAR Model Goals

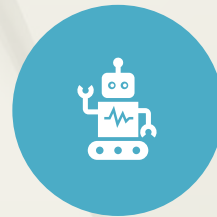

- Sense: Identify demand and system failures.

- Transmit: Connect stakeholders in real time.

- Analyze: Predict behavior, usage, and needs.

- React: Automate engagement and support.

Solution Architecture

- Tools: Salesforce, Angaza, OfficeTrack, ArcGIS.
- Integrate with APIs and AI to synchronize data.
- Unified dashboard for execution and monitoring.
- Enables real-time response across all partners.

Risk-Benefit Analysis

- Risks:
 - - Integration complexity
 - - Resistance to tech adoption
 - - Upfront cost
- Benefits:
 - - Faster execution
 - - Stronger partner visibility
 - - Better data = stronger funding
 - - Long-term cost savings

Strategic Impact

- - Faster deployment = more impact
- - Predictive maintenance = higher uptime
- - Better data = more funding
- - Integrated support = repeat partnerships

Strategic Work Appendices

- - Journey maps
- - Pain points
- - Information flows
- - Revenue models
- - AI use cases
- - Governance integration
- (See attached document for full worksheets)

Worksheet 7. Connected Strategy Matrix

Existing activities by competitors and you

	Connected Producer	Connected Retailer	Connected Market Maker	Crowd Orchestrator	P2P Network Creator
Respond-to-Desire	Sun King direct sales via fairs	Local distributors offer basic kits	Government coordinates tenders	Informal cooperative network	-
Curated Offering	Informal cooperative network	Manual bundles & promotions	No integrated offering	Ad-hoc agreements with NGOs & cooperatives	-
Coach Behavior	Basic technical training	Field support when available	Limited advisory	Occasional in-person workshops	-
Automatic Execution	Not implemented	Manual collections	Not applicable	Not applicable	-

Worksheet 8. Connected Strategy Matrix

New ideas

	Connected Producer	Connected Retailer	Connected Market Maker	Crowd Orchestrator	P2P Network Creator
Respond-to-Desire	PAYGo programs tailored to rural	CRM-driven automatic quoting	Marketplace of certified providers with all in one project offering	Salesforce integration for all actors	Virtual cooperative platform
Curated Offering	Customized solar bundles	Bundles including financing, warranty, IoT	Geo-based dynamic offers	Integrated Tableau + ArcGIS dashboards	Group purchasing
Coach Behavior	AI-driven customer coaching	E-learning for field teams	Sustainability offer and project management solution	AI-powered cooperative monitoring	Peer-to-peer maintenance communities
Automatic Execution	Auto-replenishment of batteries	Automatic alerts for maintenance	Logistics auto-scheduling	Automatic reporting to donors & government	Autonomous shared maintenance services

Worksheet 9. Deconstructing your Connected Strategy idea

	Recognize	Request			Respond			Repeat	Connection architecture	Revenue model
	Become aware of the need	Search and decide on option	Order	Pay	Receive	Experience	After sale	Learn and improve	Connect parties in ecosystem	Monetize customer relationship
Sense	GIS + demand data	CRM customer patterns	Customer purchase intent	PAYGo platform insights	Shipment tracking	Device usage data (Angaza)	Customer issue reports	KPIs and feedback	Partner activity tracking	Customer willingness to pay data
Transmit	CRM campaigns	Auto-quotations	Contract and order generation	Mobile payment integration	Notifications to all actors	Training materials + chatbot	Multichannel support	Satisfaction surveys	Automated dashboards	Personalized offers
Analyze	Identification of energy needs	Customer segmentation	Purchase accuracy	Risk-adjusted credit scoring	Logistic bottlenecks	Detect usage problems	Failure patterns	Continuous improvement loops	Network health analysis	Price elasticity analysis
React	Awareness programs	Recommended bundles	Order processing	Adaptive payment plans	Route adjustments	Remote support	Automatic troubleshooting	System upgrade proposals	Partner incentives	Dynamic pricing models

Worksheet 10. Technological solutions for each subfunction

	Recognize	Request			Respond			Repeat	Connection architecture	Revenue model
	Become aware of the need	Search and decide on option	Order	Pay	Receive	Experience	After sale	Learn and improve	Connect parties in ecosystem	Monetize customer relationship
Sense	ArcGIS + Tableau + Web Scraping portals	Salesforce CRM patterns	CRM requests	PAYGo data, Project Stage	OfficeTrack GPS	Angaza device data	Customer feedback	KPIs analysis	Salesforce partner activity	Payment patterns
Transmit	CRM campaigns	Auto-quotes via Portal	Contracts via CRM	RTGS system, Mobile payments	Portal, Delivery status via SMS	Digital manuals	WhatsApp support	Automated surveys	Shared dashboards	Personalized offers
Analyze	Demand heatmaps	Customer segmentation (Kmeans)	Order validation	Reputation, Credit scoring	Logistics optimization	Usage analysis	Failure analysis	Performance trends	Partner performance	Price sensitivity
React	Targeted awareness	Product recommendations	Order approval	Flexible payment options	Logistics adjustments	Remote support	Predictive maintenance	Continuous improvement	Partner incentives	Dynamic pricing

Worksheet 11. New Technologies and subfunctions they might enable

	Recognize	Request			Respond			Repeat	Connection architecture	Revenue model
	Become aware of the need	Search and decide on option	Order	Pay	Receive	Experience	After sale	Learn and improve	Connect parties in ecosystem	Monetize customer relationship
Sense	AI demand forecasting	AI-based recommender	CRM ordering signals	IoT for payment events	IoT for delivery tracking	Smart meters	Predictive fault detection	AI usage analysis	AI partner assessment	AI payment analysis
Transmit	Automated content (AI)	AI quotation bots	Smart contracts	Blockchain micro-payments	oT delivery notification	AR for training	NLP chatbots	Voice-of-customer platforms	Real-time data sharing	Dynamic offers AI
Analyze	AI clustering	AI-powered segmentation	AI order accuracy	AI credit scoring	AI logistics optimization	AI user profiling	AI fault diagnosis	AI continuous learning	AI network analysis	AI-driven pricing models
React	AI-targeted campaigns	Real-time product recommendations	Automated order validation	Adaptive PAYGo schemes	AI-driven logistics	AI-based customer care	Predictive maintenance	AI for system upgrades	AI-driven partner rewards	AI-optimized revenue management
